# Disclaimer

All Animal Crossing characters and assets are owned by Nintendo.

This is an unofficial, non-profit fan project made for teaching purposes, and is in no way affiliated with or endorsed by Nintendo Co., Ltd.

In fact we are extremely grateful that the Animal Crossing backdrop has saved us from yet another MCP weather server tutorial.

# Introductions

Tun Shwe  
Lenses.io

Fei Phoon  
The Economist

# First, some setup

- Have you got 4GB free? 'Cause this project is *toasty*
- Visit [tinyurl.com/anteaters26](https://tinyurl.com/anteaters26)
- Git clone the repo
- SETUP.md!
- Installation Part 1:
  - Docker or OrbStack
  - uv
- Installation Part 2:
  - Ollama
  - OpenCode
- A few notes about the workshop format

# The Basics

Ever so brief because there's another MCP  
talk tomorrow :3

# Model Context Protocol

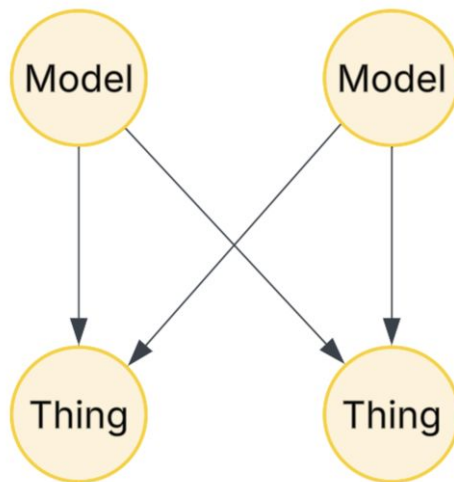

Made by Anthropic!

## Open standard

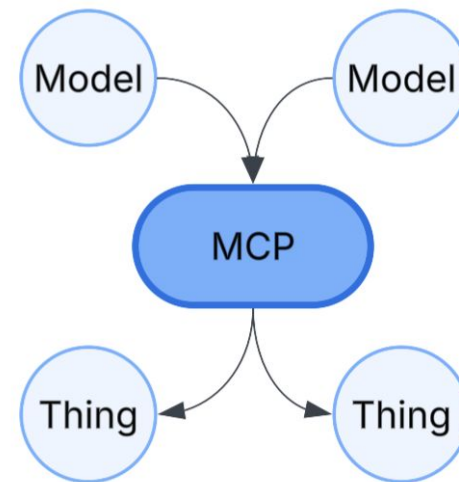

Connects tools to  
LLM systems

Model- &  
language-agnostic

Speeds up integration  
of diverse systems

Many-to-many (MxN)

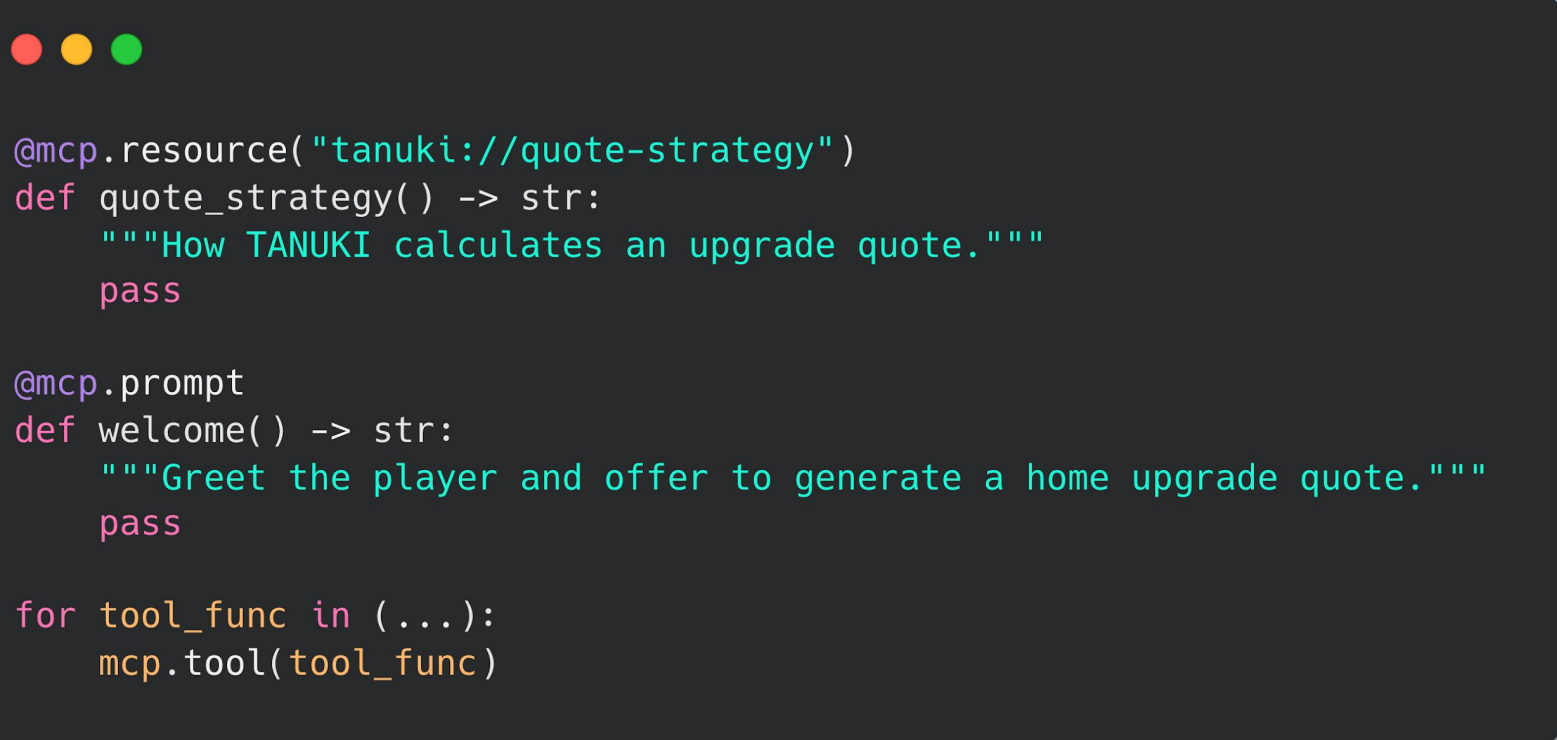

Many-to-one-to-many (M+N)

# Make an MCP server (1/4): Server

```
from fastmcp import FastMCP  
  
mcp = FastMCP("nook-mcp")
```

# Make an MCP server (2/4): Core capabilities

```
@mcp.resource("tanuki://quote-strategy")
def quote_strategy() -> str:
    """How TANUKI calculates an upgrade quote."""
    pass

# Nook MCP Architecture, now with OTel

Update this!

Don't take no for an answer! The customer is always right!!

• OP  
• "shake a

"shake a python tree"

A screenshot from the game Animal Crossing: New Horizons showing Tom Nook's office. A player character with light blue hair is standing at a wooden desk, looking at a document. Tom Nook, a raccoon-like character in a green patterned shirt, is sitting behind the desk. The desk is cluttered with various items: a green cutting mat, a red marker, a small orange balloon with a key icon, a blue binder, and a small red flag. In the background, there is a metal shelving unit with boxes, a blue printer, a small fan, and a calendar on the wall. The floor is made of orange tiles.

Tom Nook

**Now, you've weathered some serious sticker shock before, so I'm sure you can handle it, but this'll be spendy.**

# Let's head to Section 5

[workshop/SECTION-5.md](#)

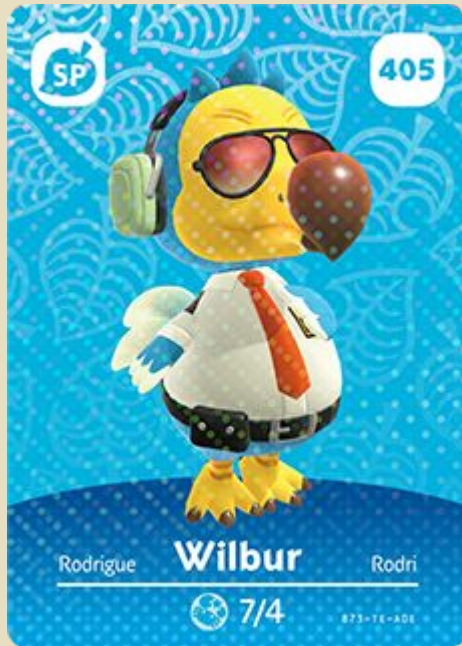

# What to Monitor

Tom Nook sees EVERYTHING.  
But admittedly, it's a bit too much

# ~~Observability Levels~~ Evaluator Depths

## Session

- Top level! Entire message history and tool trajectory

## Trace

- A single turn in a conversation, i.e. a user message & the agent response

## Span

- Which tool was selected, the parameters passed, and the result returned
